		Application	No.	Applicant(s)				

Application/Control Number: 10/507,063 Page 2

Art Unit: 1742

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Claims 1-5, drawn to a porous PM body, classified in class 75, subclass
 228.

II. Claims 6-13, drawn to a method of making a porous body, classified in class 419, subclass 64.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product can be made by high pressure compaction without heating.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. During a telephone conversation with Tom Parker on 6/17/05 a provisional election was made without traverse to prosecute the invention of I, claims 1-5.

 Affirmation of this election must be made by applicant in replying to this Office action.

Art Unit: 1742

Claims 6-13 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakagawa et al.

Nakagawa et al. discloses at col. 2, line 61 to col. 3, line 12, a porous body comprising: a mass of adhered particles;

wherein the particles comprise iron-based particles coated with copper.

Nakagawa et al. discloses an adhered mass that meets the limitations of the volume ratio by meeting the porosity limitation and adhering by joining the particles by sintering the copper coating to form the porous mass.

The Examiner particularly looks to Drawing 4 of Applicant's disclosure to determine the breadth of Applicant's claim language and determines that these limitations are met by the inherent joining of powders by sintering to obtain the porous mass of particles of Nakagawa et al.

Art Unit: 1742

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Jenkins whose telephone number is 571-272-1242. The examiner can normally be reached on M-TH6:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1242. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
